Python Challenge

For the first part of the lab, you will be working with a partner to solve **the first two** (JUST the first two, don't keep going further) challenges on this website:

http://www.pythonchallenge.com/

Once you arrive at the second challenge, spend time with your partner figuring out what exactly needs to be done to figure out the answer for it. Once you figure out what needs to be done, let your TA know, and the TA will provide you with the starter code needed to solve the challenge.

After using the starter code to solve the challenge, use the hint that is found within the solution to come up with an alternative way to solve this same challenge. Ask your TA for help if you need any.

Show your solutions to your TA before starting the second part of the lab.
